Connecting to MajorAir
-For Windows 10

In order to complete the setup and connect to MajorAir, you must be on-campus at Millsaps College.

Connecting to MajorAir

1. Tap or click the Wi-Fi icon in the taskbar. If you don’t see it, you might have to tap the up arrow to make it visible.

2. Make sure the user is not connected to another network, such as Guest or Events.

3. Tap or click MajorAir and tap or click the Connect button. Check the box that says Connect automatically.

4. Enter the following information:

   Username: MILNTDOM\Your Millsaps username  
   Password: Your Millsaps Password

5. Click OK and wait for MajorAir to connect.

6. Once MajorAir is connected, be sure to open up an Internet browser and register the device in BYOD if you are a student. Fac/Staff do not need to register devices and should be able to connect right away. The directions for BYOD are included below.

You should now be connected to MajorAir. Please note that wireless connection speeds can be intermittent, and for the best connection we recommend the wired network connection.
STUDENT DEVICE MANAGEMENT Wi-Fi Network

Device management self-service allows users to manage their own devices. Students may add a device as well as manage the other devices they own.

How to register non-802.11 devices:

- Go to: https://devreg.millsaps.edu
- Login using your Millsaps credentials
- Add the Wi-Fi MAC address and select save
- You may connect device to the BYOD wireless network to gain internet access

Note:

If you join the BYOD wireless network first without registering the device, internet access is not available until the device is registered.
